Illustration of adjustable flags for varying clearances

Installation Instructions:

- 1.) Lock out Tag out elevator and bring car to ground floor.
- 2.) Separate the car door from hoistway door, look up hoistway for obstacles.
- 3.) Place assembled cam (50" or 60") against car door and align vertically so that it clears any moving door components. Cam should be installed toward back edge of car door.  
\*\*Must be within arm's reach to disengage in case of emergency
- 4.) Mount cam using self-drilling screws (supplied). Cam should be vertical and the mounting foot pads straight. If foot pads are mounted improperly, cam may not spring properly. Test spring action once installed. \*\*Use shims as needed for spacing.
- 5.) Mount one large flag on each terminal hoistway door so car is openable within 3" of landing and not openable after 18" of travel from landing. Adjust flags as needed for clearance.
- 6.) Cam and Flags should be installed so the car door cannot open more that 4" max.
- 7.) Mount (2) large flags on intermediate hoistway doors. Spacing between flags should be as follows:  
50" Cam, spacing = < 48"  
60" Cam, spacing = < 58"
- 8.) Small Flags should be used for tall floors where span between Large Flags is greater than spacing noted above.
- 9.) Once all flags are set, run car up to make sure there is no interference.
