

LOSING MONEY ON CALL BACKS?

Introducing... **SMARTORK** Elevator Hoistway Door Closer

What does it do?

As the door closes, the innovative SMARTORK overcomes wind resistance by design. The SMARTORK, with its helical groove design, actually regains tension as it closes the door. SMARTORK provides more tension in the "door-close" cycle than it does in the "door-open" cycle. It's easy to install; just remove the "Old Style" unit and install the SMARTORK as a replacement. Call today and ask for SEES part number:
